

INCREASE FORESTRY RETURNS WITH STOCK WEIGHT GAINS.

MAKU LOTUS

Shade tolerant Maku Lotus is ideal for agroforestry situations, providing a high yield foraging crop for cattle and sheep!

MAKU IMPROVES LIVE WEIGHT GAINS

Sheep feeding trials indicate that live weight gains from Maku are superior to ryegrass, red clover, and lucerne. (DSIR—Grasslands Division).

MAKU FIXES NITROGEN MAKU IS NON-BLOATING

MAKU STABILISES SLOPES

Ideal for stabilising banks and useful for erosion control.

MAKU GROWS IN POOR SOIL TYPES

Maku can be grown on acid, wet and infertile soils including tussock grassland, pakihi soils and wet hill country. It is also grass grub resistant.

Improving the returns from your agroforestry can be as simple as sowing Maku Lotus forage legume . . .
